Re; Reference for Marina Technologies.

We purchased a 70 slip aluminum floating dock system with rotomolded floats in 2020.

From the moment we began the design phase of the project we knew we had chosen the right company to work with. Their design team was excellent and came up with some very novel solutions to ensure our requirements and outline was met.

Marina Technologies managed to design, construct and ship during COVID lockdown which was an amazing achievement in itself.

Shipping was very well documented and organized and every piece of the project arrived on time. I was impressed with the way everything was packaged for shipping to minimize damage when in transit.

Once on site and we began construction we were surprised that the construction set was so easy to follow, we had minimal questions as a result.

I had looked at most marina systems in preparation for the project and the main thing that stood out to me was the ease of construction and the ability to adapt this system to different applications. The fact that the pile bracket move laterally have saved us twice when piling so far. These factors have proven to save us time and money during construction which will allow us to open sooner and start making a profit.

In closing, I can highly recommend Marina Technologies to any company that is building a marina from scratch or refurbishing an existing site. They made it easy from beginning to end and it was a pleasure working with them throughout this project.
