LETTER OF RECOMMENDATION

I have been the engineer of record for two projects which specified Marina Technologies dock products. Both of the projects were well executed and positively received by the respective clients.

The dock designers and engineers have come up with a range of dock products that are well thought out, innovative and cost effective. The documentation, submittals, and manuals are among the best I've seen from a floating dock manufacturer.

The design, material selection and manufacturing process has resulted in dock products that exceed industry standards as well as those from other floating dock manufacturers. The high level of quality assurance and control is evident in their line of products.

Perhaps two of the most important yet commonly overlooked aspects of the marine industry are customer service and communication. I am happy to say that Marina Technologies excelled on both of these points. The specified products arrived on-time and on-budget, even early on a rush project.

The dock systems are easy to install, the proper pieces and hardware were included, labeled, and well organized.

I highly recommend Marina Technologies to anyone interested in completing a dock or marina project with a high quality system conceived and manufactured by a team of skilled professionals.

Sincerely,

Robert Cutcher
